

Tight Fixed Spreads
TD365.com

Our Mission

To provide an intuitive and functional trading platform at the world's lowest cost.

Our service has been designed by traders for serious traders, who know the value of fast execution, low costs and a quality platform.

We offer **tight fixed spreads** with all the functionality you need - without paying for all the extras you don't.

Key Benefits of our Platform

Tight Fixed Spreads

Our fixed spreads are available at any volume for the entire trading day.
UK 100 at 0.4pts, DE 30 at 0.9pts and Euro-Dollar at 0.6 pips.

200:1 Leverage

Access great Leverage up to 200:1 that you can't get in many other parts of the world.

Negative Balance Protection

Protect yourself from major adverse market moves.
Negative Balance Protection means your account will never go into negative.

Single Currency Trading

Trade everything in your chosen base currency.
Save on FX conversion fees and simplify your trading.

Secure Funds

Have confidence in the security of your account.
All funds are held in a segregated account with Barclays Bank in London.

Regulated by SCB

Be confident in trusting a regulated broker who complies with strict licensing conditions.

Why Fixed Spreads?

One of the biggest but least understood trading cost is the spread. In particular, the use of variable and stacked spreads.

Spread is the gap between the buy price you pay and the sell price you can receive at any point in time. The bigger the spread, the **higher** your trading costs.

Fixed spreads give the most **certainty** to traders. You always know your cost to exit whatever the market price movement is.

Variable spreads mean your broker can **increase** your trading **cost**. Brokers who offer spreads “from 1pt” or even “from 0 pts” are offering variable spreads. They are used to entice traders with a low headline rate, but the actual spread you will pay is much higher while the market is trading. They can get away with this if they have the advertised spread on their platform for a few seconds each day.

Let's show you an example:

Sally

Sally trades with a very well know broker advertising spreads “from 1 point”.

She trades the UK 100 index 3 times a day and has a stake size of 25 (£25 per trade).

The variable spread is advertised from 1 point but when Sally is trading the UK 100 it is actually and average of 3 points.

Sally's trading cost:

$3 \text{ trades} \times £25 \times 3 \text{ pts spread} = £225 \text{ per day}$

Peter

Peter trades with TD365 - a fixed spread broker offering 0.4 pt on the UK 100.

He also trades the UK 100 index 3 times a day and has a stake size of 25 (£25 per trade).

The spread Peter pays on UK 100 is always 0.4 points for any time he trades.

Peter's trading cost:

$3 \text{ trades} \times £25 \times 0.4 \text{ pts spread} = £30 \text{ per day}$

Same trades, same stake size and the same market.

Sally pays £195 PER DAY more than Peter.

If they trade 200 days of the year, Peter is saving **£39,000 every year!**

World Exclusive Offer

TD365 has partnered with world renowned trader and educator, AL BROOKS, to bring you an amazing educational offer.

Al Brooks has developed two Price Action Courses exclusively packaged for TD365.

Beginner Course

Open an account with TD365 and you will receive access to 27 units and 6 ½ hours of content. No need to fund your account – we are happy for you to build or refresh your trading skills before you start.
